This article is part of a Special Issue entitled: Membrane Proteins. Molecular dynamics (MD) simulation is a widely used computational tool to explore In this model, several atoms in proteins and lipids are approximated as a single They also carried out ?-REMD simulations of the WALP23 peptide in POPC lipid .

Mechanistically, it is possible that the normal function of fld-1 is either to limit the generation of LCPUFA-containing phospholipids or to promote their turnover. FRAP experiments in C. The phenotypes include membrane fluidity as tested by FRAP experiments worm length, and the acyl chain composition of membrane lipid.
