Collaborate with an international trading company based in Lugano on research topics related to the energy power market. In Stock. By John L.

Optimization software becomes a major bottleneck for the energy system mode. Alternatively, if you have a specific interest or have any ideas of your own that are not listed, we are open for discussion. Newer computer architectures rely on multi-core, multi-chip designs to achieve the highest performance; programmers, therefore, need to utilize multi-threading and parallel programming techniques in their applications to achieve high performance on these new designs.
